

Taylor Growden

Senior Software Engineer

I'm a problem-solver: I excel at making elegant solutions to all sorts of problems, but am especially passionate about front-end engineering. When I'm not writing code I enjoy seeing live music, trying new beers, and working with my hands.

Experience

Feb 2021 -
Present

Senior Software Engineer, [H1. Insights](#)

- Worked directly with product managers, designers, stakeholders, and other engineers to define, prioritize, and plan features in an ever-changing environment, while also developing those features and seeing them through to completion.
- Worked with the design team to create, maintain, and document a React component library compliant with the company's design style guide.
- Owned, oversaw, and released domain-specific code as part of the product's distributed architecture.

Nov 2018 -
Feb 2021

Software Engineer, [H1. Insights](#)

Working on a product that is "trusted by the top pharmaceutical, biotech, financial, data and healthcare organizations around the world", I have continued to provide new, industry-shaping product features with a small team of talented engineers and data scientists.

Nov 2017 -
Nov 2018

Web App Developer, [Exclamation Labs](#)

As an agency that focuses in the financial and insurance sectors, I specialized in taking the clients' specific, complex needs and implementing simple-to-use solutions.

Technical Expertise

Expertise

I'm always learning something new and I pride myself in picking the right tool for the job.

I've worked with plenty of languages and technologies. **Typescript** is my language of choice and **React** is my go-to frontend library. For I have experience with **Java**, **Rust**, and **WASM**. For data-store solutions, I prefer to work with **GraphQL**, **MongoDB**, **Postgres**, **Redis**, and **ElasticSearch**. You can check out some of my work on Github.
